PESTICIDAL COMPOSITION FOR SEED TREATMENT

Field of the Invention

The present invention relates to an at least quaternary pesticidal composition that is suitable for controlling insects and/or representatives of the order Acarina and microorganisms, especially phytopathogenic fungi, comprising (a) at least one insecticide and (b) at least three fungicides. The pesticidal composition is particularly suitable for the protection of plant propagation materials.

Background of the Invention

Certain mixtures of active ingredients for controlling pests are described in the literature. The biological properties of those known mixtures are not entirely satisfactory in the area of pest control, toxicity, pest resistance and loading rates. The protection of plant propagation materials (seed treatments) with pesticides are target applications which partially address the need for a reduction of environmental and worker exposure and pest resistance buildup when used alone or in conjunction with foliar or furrow pesticide applications. However, there is also a need to make available other mixtures which reduce the need for older acutely toxic insecticides and to reduce loading rates. Among the older insecticides, the following may be mentioned: tefluthrin, cypermethrin, thiodicarb, lindane, furathiocarb, acephate, butocarboxim, carbofuran, NTN, endosulfan, diethion, aldoxycarb, methiocarb, oftanol, (isofenphos), chlorpyrifos, bendiocarb, benfuracarb, oxamyl, parathion, capfos, dimethoate, fonofos, chlorfenvinphos, cartap, fenthion, fenitrothion, HCH, deltamethrin, malathion, disulfoton. Accordingly, there is a need to provide pesticide compositions and methods for the protection of plant propagation materials, especially those compositions having improved biological properties, for example synergistic pesticidal properties, especially for controlling insects and representatives of the order Acarina and microorganisms. That problem is solved according to the invention by the provision of the present at least quaternary pesticidal composition.

Summary of the Invention

The present invention provides an at least quaternary composition for controlling insects or representatives of the order Acarina and microorganisms, which composition comprises: (A) at

least one insecticidally or acaricidally active compound, and (B) at least three fungicidally active compounds.

More specifically, the present invention provides an at least quaternary composition for controlling insects or representatives of the order Acarina and microorganisms, especially phytopathogenic fungi, that is particularly suitable for the protection of plant propagation materials such as oil seeds (especially canola (rape) seed). The at least quaternary pesticidal composition of the present invention comprises: (A) an insecticidally effective amount of at least one neonicotinoid or phenylpyrazole insecticide, and (B) a fungicidally effective amount of at least three fungicides including: (B1) at least one phenylamide (acylalanine type), (B2) at least one phenylpyrrole and (B3) at least one triazole.

The invention also relates to a process for protecting the plant propagation materials and the plants resulting therefrom against insects and fungal diseases using a pesticidal composition according to the invention. It also relates to the said plant propagation materials coated with the said pesticidal composition.

The present invention makes it possible to dress or treat seeds and other plant propagation materials with lower amounts of older acutely toxic biocides than is known from the prior art and therefore represents a material enrichment of the art.

Description of Specific Embodiments

Insecticide component (A)

Preferred are at least quaternary pesticidal compositions comprising as insecticidally active ingredient (A):

at least one neonicotinoid compound of formula (I)

wherein

A is 2-chloropyrid-5-yl, 2-methylpyrid-5-yl, 1-oxido-3-pyridinio, 2-chloro-1-oxido-5-pyridinio, 2,3-dichloro-1-oxido-5-pyridinio, tetrahydrofuran-3-yl, 5-methyl-tetrahydrofuran-3-yl or 2-chlorothiazol-5-yl group,

R is hydrogen, C₁-C₆alkyl, phenyl-C₁-C₄alkyl, C₃-C₆cycloalkyl, C₂-C₆alkenyl or C₂-C₆alkynyl;

R₁ and R₂ are independently of each other C₁-C₄-alkyl, C₁-C₄-alkenyl, C₁-C₄-alkinyl, -C(=O)-CH₃ or benzyl; or together form a group -CH₂-CH₂-, -CH₂-CH₂-CH₂-, -CH₂-O-CH₂-, -CH₂-S-CH₂-, -CH₂-NH-CH₂- or -CH₂-N(CH₃)-CH₂-; and

X is N-NO₂ or N-CN or CH-NO₂; , or, where appropriate, a tautomer thereof, in each case in free from or in salt form; or

at least one phenylpyrazole compound of formula (II)

wherein

R₁ and R₂ may represent a hydrogen or halogen atom (at least one of them is preferably other than hydrogen),

R₃ may represent a halogen atom or a haloalkyl or haloalkoxy or SF₅ group, in the 4 position on the phenyl ring,

R₄ may represent an alkyl or haloalkyl group,

R₅ may represent an amino group which may be mono- or di- substituted by an alkyl or haloalkyl radical, acyl, alkoxycarbonyl, and

n is 0, 1 or 2; in free from or in salt form.

The compounds (I) may be in the form of tautomers. Accordingly, hereinbefore and hereinafter, where appropriate the compound compounds (I) are to be understood to include corresponding tautomers, even if the latter are not specifically mentioned in each case.

The compounds (I) to (II) are capable of forming acid addition salts. Those salts are formed, for example, with strong inorganic acids, such as mineral acids, for example perchloric acid, sulfuric acid, nitric acid, nitrous acid, a phosphoric acid or a hydrohalic acid, with strong organic carboxylic acids, such as unsubstituted or substituted, for example halo-substituted, C₁-C₄alkanecarboxylic acids, for example acetic acid, saturated or unsaturated dicarboxylic acids, for example oxalic, malonic, succinic, maleic, fumaric or phthalic acid, hydroxycarboxylic acids, for example ascorbic, lactic, malic, tartaric or citric acid, or benzoic acid, or with organic sulfonic acids, such as unsubstituted or substituted, for example halo-substituted, C₁-C₄alkane- or aryl-sulfonic acids, for example methane- or p-toluene-sulfonic acid. Furthermore, compounds of formula (I) or (II) having at least one acidic group are capable of forming salts with bases. Suitable salts with bases are, for example, metal salts, such as alkali metal or alkaline earth metal salts, for example sodium, potassium or magnesium salts, or salts with ammonia or an organic amine, such as morpholine, piperidine, pyrrolidine, a mono-, di- or tri-lower alkylamine, for example ethyl-, diethyl-, triethyl- or dimethyl-propyl-amine, or a mono-, di- or tri-hydroxy-lower alkylamine, for example mono-, di- or tri-ethanolamine. In addition, corresponding internal salts may also be formed. Preference is given within the scope of the invention to agrochemically advantageous salts. In view of the close relationship between the compounds of formula (I) and (II) in free form and in the form of their salts, any reference hereinbefore or hereinafter to the free compounds of formula (I) and (II) or to their respective salts is to be understood as including also the corresponding salts or the free compounds of formula (I) and (II), where appropriate and expedient. The same applies in the case of tautomers of compounds of formula (I) and (II) and the salts thereof. The free form is generally preferred in each case.

Preferred compounds of the formula (I) are those wherein

A is a pyrid-3-yl, 2-chloropyrid-5-yl, 2-chloro-1-oxido-5-pyridinio or 2-chlorothiazol-5-yl group; particularly a 2-chloropyrid-5-yl group or preferably a 2-chlorothiazol-5-yl group;

wherein R is C₁-C₆alkyl, phenyl-C₁-C₄alkyl, C₃-C₄alkenyl or C₃-C₄alkynyl;

more especially C₁-C₄alkyl, preferably methyl;

R₁ and R₂ are independently of each other C₁-C₄-alkyl or benzyl, or together a group -CH₂-CH₂-, -CH₂-CH₂-CH₂-, -CH₂-O-CH₂-, -CH₂-S-CH₂-, -CH₂-NH-CH₂-, -CH₂-N(CH₃)-CH₂-, especially group -CH₂-CH₂- or -CH₂-O-CH₂-, particularly -CH₂-O-CH₂-; and

X is N-NO₂ or N-CN, more especially N-NO₂.

Especially preferred is an at least quaternary pesticidal composition comprising an insecticidally effective amount of a compound selected from the group consisting of: a compound of the formula

(Ia),

imidacloprid, (E)-1-(2-chlorothiazol-5-ylmethyl)-3-methyl-nitroguanidine (TI-435), nitenpyram, thiacloprid, and acetamiprid; particularly the compound of the formula (Ia) (thiamethoxam).

The alkyl, alkoxy or acyl groups of the formula (II) are preferably lower alkyl, alkoxy or acyl, that is to say radicals having one to four carbon atoms.

A preferred group of insecticidally effective 1-arylpyrazoles (II) of the present invention are those wherein:

R₁ and R₂ are a halogen atom,

R₃ is 4-haloalkyl

R₄ is lower haloalkyl and R₅ is amino.

A specific 1-arylpyrazole (II) usable in the compositions and methods falling within the scope of the present invention is fipronil.

The compounds of the formula (I) are known for instance from EP-A-580 553;

Imidacloprid is known from The Pesticide Manual, 11th Ed. (1997), The British Crop Protection Council, London, page 706;

Nitenpyram from The Pesticide Manual, 11th Ed. (1997), The British Crop Protection Council, London, page 880;

TI-435 from EP-A-376,279;

Thiacloprid from EP-A-235'725; and

Fipronil from The Pesticide Manual, 11th Ed. (1997), The British Crop Protection Council, London, page 545.

Fungicide components (B)

Preferred are at least quaternary pesticidal compositions comprising as fungicidally active ingredient (B):

(B1) as first active ingredient at least one phenylamide (acylalanine type) of the formula (III):

wherein

R₁ is methyl; R₂ is in ortho position to the amino group and is methyl, ethyl or chlorine; R₇ and R₈ independently are hydrogen or methyl; R' is methyl; and Y is -OR₄ or -SR₄ in which R₄ is methyl, ethyl, propyl, isopropyl, butyl, sec. butyl or tert. butyl; and enantiomers thereof; in free form or in salt form..

Preferred phenylamide derivatives of formula (III) usable in the compositions and methods falling within the scope of the present invention include metalaxyl; metalaxyl consisting of more than 70% by weight of the R-enantiomer; metalaxyl consisting of more than 85% by weight of the R-enantiomer; metalaxyl consisting of more than 92% by weight of the R-enantiomer; metalaxyl consisting of more than 97% by weight of the R-enantiomer; and mefenoxam (i.e., R-metalaxyl or metalaxyl-M).

(B2) as second active ingredient at least one phenylpyrrole of the formula (IV):

wherein

X is hydrogen or CO—R₁, wherein R₁ is C₁–C₆alkyl which is unsubstituted or substituted by halogen or C₁–C₃alkoxy; or is C₃–C₆alkenyl, C₃–C₆alkynyl, or C₁–C₆alkoxy which is unsubstituted or substituted by halogen or C₁–C₃alkoxy; or is C₃–C₆alkenyloxy, or C₃–C₆cycloalkyl; in free form or in salt form.

A specific phenylpyrrole (IV) usable in the compositions and methods falling within the scope of the present invention is fludioxonil.

(B3) As third active ingredient at least one triazole of the formula (V):

wherein

R₁₂, R₁₅ and R₁₈ are hydrogen, halogen, C₁–C₃alkyl, C₁–C₃alkoxy or nitro; in free form or in salt form.

A specific triazole (V) usable in the compositions and methods falling within the scope of the present invention is difenoconazole.

The compounds of the formula (III) are known for instance from U.S. 4,151,299;

The compounds of the formula (IV) from U.S. 4,705,800;

The compounds of the formula (V) from U.S. 5,266,585;

Difenoconazole is known from The Pesticide Manual, 10th Ed. (1994), The British Crop Protection Council, London, page 328;

Fludioxonil from The Pesticide Manual, 11th Ed. (1997), The British Crop Protection Council, London, page 566;

Metalaxyl from The Pesticide Manual, 11th Ed. (1997), The British Crop Protection Council, London, page 792; and

R-metalaxyl (mefenoxam) from The Pesticide Manual, 11th Ed. (1997), The British Crop Protection Council, London, page 794.

A.I. Combination

Surprisingly, it has been found that the combination of the active ingredients (A), (B1), (B2) and (B3) results in a quite unexpectedly enhanced action against insects or representatives of the order Acarina and microorganisms such as seed-borne and soil-borne fungi and/or provides other unexpected advantages when used in connection with plant propagation materials. The increase in action and/or other advantageous properties achieved with the combination according to the invention is significantly greater than the activity to be expected by the four individual components, i.e. the activity is enhanced synergistically which, inter alia, extends the boundaries of the pesticidal activity of the compounds.

In particular, it has now been found, surprisingly, that, for example, the pesticidal activity of the compositions according to the invention, compared with the pesticidal activity of the individual components, is not merely additive, as may essentially be expected, but that a synergistic effect exists. The term "synergistic" is not, however, in any way limited in this context to the pesticidal activity, but refers equally to other advantageous properties of the compositions according to the invention as compared with the individual components. Examples of such advantageous properties that may be mentioned are: a broadening of the spectrum of pesticidal activity to other pests, for example to resistant strains; a reduction in the rate of application of the active ingredients; adequate control of the pests with the aid of the compositions according to the invention, even at a rate of application at which the individual compounds are totally ineffective; advantageous behavior during formulating and/or upon application, for example upon grinding, sieving, emulsifying, dissolving or dispersing; increased storage stability; improved stability to light; more advantageous degradability; improved toxicological and/or ecotoxicological behavior; improved crop characteristics including: emergence, crop yields, more developed root system, tillering increase, increase in plant height, bigger leaf blade, less dead basal leaves, stronger tillers, greener leaf color, less fertilizers needed, less seeds needed, more productive tillers, earlier flowering, early grain maturity, less plant verse (lodging), increased shoot growth, improved plant vigor, and early germination; or any other advantages familiar to a person skilled in the art.

In the area of pest control, the compositions according to the invention are valuable reductive (reducing the occurrence of a pest), preventive and/or curative active ingredients having a very advantageous biocidal spectrum even at low rates of concentration, while being well tolerated by warm-blooded animals, fish and plants. The compositions of the invention are effective against all or individual development stages of normally sensitive animal pests, but also of resistant animal pests, such as insects and representatives of the order Acarina, and phytopathogenic fungi. The insecticidal, acaricidal and/or fungicidal action of the compositions of the invention may manifest itself directly, i.e. in the mortality of the pests, which occurs immediately or only after some time, for example during molting, or indirectly, for example in reduced oviposition and/or a reduced hatching rate, the good activity corresponding to a mortality of at least 50 to 60 %.

Advantageous mixing ratios of the at least four active ingredients are (A):(B1):(B2):(B3)=(250 to 50):(5 to 1):(2 to 1):(20 to 1), in particular (A):(B1):(B2):(B3)=(200 to 60):(3 to 1):(1.5 to 1):(10 to 1) and very particularly (A):(B1):(B2):(B3)=(160 to 120):(3 to 2):(1.2 to 1):(10 to 4). Other advantageous mixing ratios are (A):(B1):(B2):(B3)=(160):(3):(1):(9.6), or (120):(2):(1):(4.8).

The active ingredient combinations according to the invention preferably comprise a compound of formula (I) to (II), especially of the formula (I), more especially of the formula (Ia), and metalaxyl, fludioxonil and difenoconazole.

Preference is given especially to an active ingredient combination comprising the compound of formula (Ia), metalaxyl-M, fludioxonil and difenoconazole in a mixing ratio of (160):(3):(1):(9.6) or (260):(7.5):(2):(16) or (400g):(7.5g):(2.5g):(24g).

The above-mentioned mixing ratios relate on the one hand to parts by weight of the individual components, but on the other hand also to the mixing ratios in moles. Thus, for example, with respect to the previous paragraph the ratio of (250 to 50):(1):(1):(1) denotes from about 250 to about fifty parts by weight of a compound of formula (Ia) to one part by weight of a each of metalaxyl-M, fludioxonil and difenoconazole; but also from about 250 to about fifty moles of a compound of formula (Ia) to one mole of a each of the compounds metalaxyl-M, fludioxonil and difenoconazole. In addition, it will be understood that 1 part by weight may equal the actual

weight of the active component with the lowest loading. For example, a mixing ratio of (160):(3):(1):(9.6) parts would equal the ratio (400g):(7.5g):(2.5g):(24g) in grams (wherein 2.5 grams is considered "1 part"). Finally, the figures relate also to mixtures in the ratio of the LD₅₀ values of the individual pests to be controlled.

Fungal Pests

The compositions according to the invention are especially active against fungi, in particular of the oomycetes which belong to the class of phycomycetes (e.g., *Phytophthora*, *Peronospora*, *Pseudoperonospora*, *Pythium* sp. or *Plasmopara*), basidiomycete, ascomycete, adelomycete or Fungi Imperfecti type, such as *Botrytis cinerea*, *Erysiphe graminis*, *Puccinia graminis*, *Puccinia recondita*, *Piricularia oryzae*, *Cercospora beticola*, *Puccinia striiformis*, *Erysiphe cichoracearum*, *Rhizosporium secalis*, *Fusarium*, *Solani*, *Fusarium oxysporum* (e.g. *melonis*), *Pyrenophora avenae*, *Septoria tritici*, *Septoria avenae*, *Uromyces sclerotiorum*, *Mycosphaerella fijiensis*, *Alternaria solani*, *Aspergillus niger*, *Cercospora arachidicola*, *Cladosporium herbarum*, *Tilletia caries*, *Tilletia controversa*, *Fusarium roseum*, *Fusarium nivale*, *Helminthosporium oryzae*, *Helminthosporium teres*, *Helminthosporium gramineum*, *Helminthosporium sativum*, *Penicillium expansum*, *Pestalotia* sp, *Phoma betae*, *Phoma foveata*, *Phoma lingam*, *Ustilago maydis*, *Ustilago nuda*, *Ustilago hordei*, *Ustilago avenae*, *Verticillium dahliae*, *Ascochyta pisi*, *Guignardia bidwellii*, *Corticium rolfsii*, *Phomopsis viticola*, *Sclerotinia sclerotiorum*, *Sclerotinia minor*, *Coryneum cardinale*, *Rhizoctonia solani*, *Acrostalagmus koningi*, *Alternaria*, *Colletotrichum*, *Corticium rolfsii*, *Diplodia natalensis*, *Gaeumannomyces graminis*, *Gibberella fujikuroi*, *Hormodendron cladosporioides*, *Myrothecium verrucaria*, *Paecilomyces varioti*, *Pellicularia sasakii*, *Phellinus megaloporus*, *Sclerotium rolfsii*, *Stachybotris atra*, *Trichoderma pseudokoningi*, *Trichothecium roseum*.

The compositions according to the invention are particularly suited for the reductive, preventive and the curative protection of the plant propagation material against fungi and fungal diseases including: damping off (e.g., *Fusarium* sp., *Pythium* sp., *Rhizoctonia* sp.), root rot (e.g., *Pythium* sp., *Fusarium* sp., *Gibberella* sp.), and seed or soil borne blackleg (*Leptosphaeria maculans*) diseases of vegetable organisms and plants in general, and especially of oil seed crops such as canola (rape), mustard seed, and hybrids thereof, and also rice and maize.

Insect Pests

The compositions according to the invention may be used for the protection of the plant propagation material and developing plants against animal pests such as insects and representatives of the order Acarnia including:

from the order Lepidoptera, for example,

Acleris spp., Adoxophyes spp., Aegeria spp., Agrotis spp., Alabama argillaceae, Amylois spp., Anticarsia gemmatilis, Archips spp., Argyrotaenia spp., Autographa spp., Busseola fusca, Cadra cautella, Carposina nipponensis, Chilo spp., Choristoneura spp., Clysia ambiguella, Cnaphalocrocis spp., Cnephasia spp., Cochylis spp., Coleophora spp., Crocidolomia binotalis, Cryptophlebia leucotreta, Cydia spp., Diatraea spp., Diparopsis castanea, Earias spp., Ephestia spp., Eucosma spp., Eupoecilia ambiguella, Euproctis spp., Euxoa spp., Grapholita spp., Hedya nubiferana, Heliothis spp., Hellula undalis, Hyphantria cunea, Keiferia lycopersicella, Leucoptera scitella, Lithocollethis spp., Lobesia botrana, Lymantria spp., Lyonetia spp., Malacosoma spp., Mamestra brassicae, Manduca sexta, Operophtera spp., Ostrinia nubilalis, Pammene spp., Pandemis spp., Panolis flammea, Pectinophora gossypiella, Phthorimaea operculella, Pieris rapae, Pieris spp., Plutella xylostella, Prays spp., Scirpophaga spp., Sesamia spp., Sparganothis spp., Spodoptera spp., Synanthedon spp., Thaumetopoea spp., Tortrix spp., Trichoplusia ni and Yponomeuta spp.;

from the order Coleoptera, for example,

Agriotes spp., Anthonomus spp., Atomaria linearis, Chaetocnema tibialis, Cosmopolites spp., Curculio spp., Dermestes spp., Diabrotica spp., Epilachna spp., Eremnus spp., Leptinotarsa decemlineata, Lissorhoptrus spp., Melolontha spp., Oryzaephilus spp., Otiorhynchus spp., Phlyctinus spp., Popillia spp., Psylliodes spp., Rhizopertha spp., Scarabeidae, Sitophilus spp., Sitotroga spp., Tenebrio spp., Tribolium spp. and Trogoderma spp.;

from the order Orthoptera, for example,

Blatta spp., Blattella spp., Gryllotalpa spp., Leucophaea maderae, Locusta spp., Periplaneta spp. and Schistocerca spp.;

from the order Isoptera, for example,

Reticulitermes spp.;

from the order Psocoptera, for example,

Liposcelis spp.;

from the order Anoplura, for example,

Haematopinus spp., Linognathus spp., Pediculus spp., Pemphigus spp. and Phylloxera spp.;

from the order Mallophaga, for example,

Damalinea spp. and *Trichodectes* spp.;

from the order Thysanoptera, for example,

Frankliniella spp., *Hercinothrips* spp., *Taeniothrips* spp., *Thrips palmi*, *Thrips tabaci* and *Scirtothrips aurantii*;

from the order Heteroptera, for example,

Cimex spp., *Distantiella theobroma*, *Dysdercus* spp., *Euchistus* spp., *Eurygaster* spp., *Leptocorisa* spp., *Nezara* spp., *Piesma* spp., *Rhodnius* spp., *Sahlbergella singularis*, *Scotinophara* spp. and *Triatoma* spp.;

from the order Homoptera, for example,

Aleurothrixus floccosus, *Aleyrodes brassicae*, *Aonidiella* spp., *Aphididae*, *Aphis* spp., *Aspidiotus* spp., *Bemisia tabaci*, *Ceroplaster* spp., *Chrysomphalus aonidium*, *Chrysomphalus dictyospermi*, *Coccus hesperidum*, *Empoasca* spp., *Eriosoma larigerum*, *Erythroneura* spp., *Gascardia* spp., *Laodelphax* spp., *Lecanium corni*, *Lepidosaphes* spp., *Macrosiphus* spp., *Myzus* spp., *Nephotettix* spp., *Nilaparvata* spp., *Paratoria* spp., *Pemphigus* spp., *Planococcus* spp., *Pseudaulacaspis* spp., *Pseudococcus* spp., *Psylla* spp., *Pulvinaria aethiopica*, *Quadraspidotus* spp., *Rhopalosiphum* spp., *Saissetia* spp., *Scaphoideus* spp., *Schizaphis* spp., *Sitobion* spp., *Trialeurodes vaporariorum*, *Trioza erytrae* and *Unaspis citri*;

from the order Hymenoptera, for example,

Acromyrmex, *Atta* spp., *Cephus* spp., *Diprion* spp., *Diprionidae*, *Gilpinia polytoma*, *Hoplocampa* spp., *Lasius* spp., *Monomorium pharaonis*, *Neodiprion* spp., *Solenopsis* spp. and *Vespa* spp.;

from the order Diptera, for example,

Aedes spp., *Antherigona soccata*, *Bibio hortulanus*, *Calliphora erythrocephala*, *Ceratitis* spp., *Chrysomyia* spp., *Culex* spp., *Cuterebra* spp., *Dacus* spp., *Drosophila melanogaster*, *Fannia* spp., *Gastrophilus* spp., *Glossina* spp., *Hypoderma* spp., *Hyppobosca* spp., *Liriomyza* spp., *Lucilia* spp., *Melanagromyza* spp., *Musca* spp., *Oestrus* spp., *Orseolia* spp., *Oscinella frit*, *Pegomyia hyoscyami*, *Phorbia* spp., *Rhagoletis pomonella*, *Sciara* spp., *Stomoxys* spp., *Tabanus* spp., *Tannia* spp. and *Tipula* spp.;

from the order Siphonaptera, for example,

Ceratophyllus spp. und *Xenopsylla cheopis* and

from the order Thysanura, for example,

Lepisma saccharina.

The active ingredients according to the invention are particularly suitable for controlling crucifer flea beetles (*Phyllotreta* spp.), root maggots (*Delia* spp.), cabbage seedpod weevil (*Ceutorhynchus* spp.) and aphids in oil seed crops such as canola (rape), mustard seed, and hybrids thereof, and also rice and maize.

Target Crops

Target crops within the scope of this invention are, for example, the following plant species: beet (sugar beet and fodder beet), oil plants (canola, rape, mustard seed, poppy, olives, sunflowers, coconut, castor oil plants, cocoa beans, groundnuts and soya).

In addition, the crops listed in the crop group tables in 40 CFR Sec. 180.41 (1995) are noted. 40 CFR Sec. 180.41 (1995) and the Federal Register: May 17, 1995 (vol. 60, no. 95) pp. 26625 - 26643 are fully incorporated by reference herein for their disclosure relating to useful crop plants:

- (1) Crop Group 5: Brassica (Cole) Leafy Vegetables Group, for example, broccoli, cauliflower; cabbage; and mustard greens;
- (2) Crop Group 9: Cucurbit Vegetables Group, for example, cucumber, muskmelon and summer squash;
- (3) Crop Group 11: Pome Fruits Group, for example, apple and pear;
- (4) Crop Group 15: Cereal Grains Group, for example, corn and rice.

The following plants are to be regarded as being particularly suitable target crops for the at least quaternary pesticide compositions of the invention: plant propagation materials (such as seeds) of oil plants (canola, rape, mustard seed, poppy, olives, sunflowers, coconut, castor oil plants, cocoa beans, groundnuts).

Seed Treatment

The at least quaternary pesticidal composition according to the invention has proved especially advantageous for protecting seeds, in particular, oil seeds such as canola. However, the inventive composition is also suitable for direct treatment of the soil or of other parts of the plant. The inventive composition is well tolerated by plants, and is ecologically acceptable.

The subject of the invention is also a method for protecting the multiplication products of plants (plant propagation materials) and the plants resulting therefrom against insects and fungal

diseases, wherein the said multiplication products are coated with an insecticidal and fungicidal and non-phytotoxic composition according to the invention.

The at least quaternary pesticidal composition according to the invention is usually employed together with the adjuvants customary in formulation technology. The combination of the active ingredients (A), (B1), (B2) and (B3) are normally applied to plant propagation material in the form of compositions, but also can be applied to the seed or to the locus of propagation thereof (such as a furrow), simultaneously or in succession, with further compounds. These further compounds can be fertilizers or micronutrient donors or other preparations that influence plant growth. They can also be selective herbicides, insecticides, fungicides, bactericides, insect growth regulators, plant growth regulators, nematicides, molluscicides or mixtures of several of these preparations, if desired together with further carriers, surfactants or application-promoting adjuvants customarily employed in the art of formulation.

This invention also includes suitable agricultural compositions for controlling insects and fungi on or in seed consisting essentially of at least quaternary pesticidal composition of this invention plus a suitable inert surfactant or a suitable inert liquid or a solid carrier. As used herein, the phrase "consisting essentially of" does not exclude the presence of other active pesticidal materials or conventional formulating ingredients.

The active components (A), (B1), (B2) and (B3) are processed in known manner to give, for example, emulsifiable concentrates, suspoemulsions, spreadable pastes, directly sprayable or dilutable solutions, dilute emulsions, wettable powders, soluble powders, dusts, granules, and also for encapsulation in, for example, polymeric substances. The application methods, such as spraying, misting, atomising, broadcasting, brushing or pouring, and the nature of the composition are adapted to suit the intended aims and the prevailing circumstances. In general, favorable rates of application are 0.0005 to not more than 0.5 kg, in particular 0.001–0.03 kg of each active ingredient (B1), (B2) and (B3) per 100 kg of material to be protected. With respect to the active ingredient (A), the favorable rates of application can range from 0.005 to not more than 1 kg, in particular 0.01–0.8 kg, more particularly 0.1–0.5 kg per 100 kg of material to be protected. However, the application conditions depend essentially on the nature (surface area, consistency, moisture content) of the material and on its environmental factors. Accordingly, within these ranges, those skilled in the art will choose, on the basis of their general body of

knowledge and, where appropriate, a few experiments, doses which are non-phytotoxic but effective from a fungicidal and/or insecticidal standpoint.

The term "plant propagation material" is understood to denote all the generative parts of the plant such as seeds which can be used for the multiplication of the latter and vegetative plant material such as cuttings and tubers (for example potatoes). There may be mentioned, e.g., the seeds (in the strict sense), roots, fruits, tubers, bulbs, rhizomes, parts of plants. Germinated plants and young plants which are to be transplanted after germination or after emergence from the soil, may also be mentioned. These young plants may be protected before transplantation by a total or partial treatment by immersion.

Also within the scope of the present invention, storage goods which can be protected with the mixture according to the invention, in particular plant propagation material, especially seeds, will be understood as meaning natural substances of vegetable and/or animal origin and their processing products for which long-term protection is desired, for example the plants and parts thereof, which are mentioned below (stalks, leaves, tubers, seeds, fruits, grains) which have been taken from the natural life cycle and which exist in the freshly harvested state or in processed form (pre-dried, moistened, comminuted, ground, pressed, roasted, etc.). Also falling within the scope of the invention is the protection of timber, whether in the form of crude timber (construction timber, electricity pylons, barriers) or in the form of finished articles (furniture, objects made from wood). Natural products of animal origin which are to be preserved, for example hides, furs, hairs and the like, likewise fall within the scope of the invention.

The techniques of seed treatment application are well known to those skilled in the art, and they may be used readily in the context of the present invention. The active ingredients can be formulated and applied as a slurry, a solid seed coating, a soak, or as a dust on the surface of the seed. There also may be mentioned, e.g., film-coating or encapsulation. The coating processes are well known in the art, and employ, for seeds, the techniques of film-coating or encapsulation, or for the other multiplication products, the techniques of immersion. Needless to say, the method of application of the compounds to the seed may be varied and the invention is intended to include any technique which is to be used.

A preferred method of applying the mixture according to the invention consists in spraying or wetting the plant propagation material with a liquid preparation, or mixing the plant material with a solid preparation of the active ingredients.

The compounds of this invention may be formulated or mixed in the seed treater tank or combined on the seed by overcoating with other seed treating agents. The agents to be mixed with the compounds of this invention may be for the control of pests, modification of growth, nutrition, or for the control of plant diseases.

Formulations

The formulations, i.e. the compositions, preparations or combinations containing the active ingredients (A), (B1), (B2) and (B3), as well as, if appropriate, suitable inert solid or liquid carriers, are prepared in a known manner, for example by intimately mixing and/or grinding the active ingredients with inert, agriculturally-acceptable extenders, for example with solid or liquid carriers and, if appropriate, surface-active compounds (surfactants). Such compositions may be advantageously formulated as flowable compositions, suspensions, microsuspensions, suspoemulsions, wettable powders, granulated concentrates, microemulsions and the like, all of which lend themselves to seed treatment application and provide the requisite plant protection.

The term "carrier" in the present description denotes a natural or synthetic, organic or inorganic material with which the active substance is combined in order to facilitate its application to the plant, to the seeds or to the soil. This carrier is hence generally inert, and it must be agriculturally acceptable, in particular to the plant being treated. The carrier may be solid (clays, natural or synthetic silicates, silica, resins, waxes, solid fertilizers, and the like) or liquid (water, alcohols, ketones, petroleum fractions, aromatic or paraffinic hydrocarbons, chlorinated hydrocarbons, liquefied gases, and the like).

Suitable liquid carriers are: aromatic hydrocarbons, in particular the fractions C_8 to C_{12} , such as xylene mixtures or substituted naphthalenes, phthalic esters such as dibutyl or dioctyl phthalate, aliphatic hydrocarbons such as cyclohexane or paraffins, alcohols and glycols as well as their ethers and esters, such as ethylene glycol monomethyl ether, ketones such as cyclohexanone, strongly polar solvents such as N-methyl-2-pyrrolidone, dimethyl sulfoxide or dimethylformamide, and, if appropriate, epoxidized vegetable oils or soybean oil; or water.

Solid carriers which may be used, for example for dusts and dispersible powders, are calcite, talc, kaolin, montmorillonite or attapulgite, highly-disperse silica or absorptive polymers. Possible particulate, adsorptive carriers for granules are pumice, crushed brick, sepiolite or bentonite, montmorillonite-type clay, and possible nonsorbent carrier materials are calcite or dolomite.

Suitable surface-active compounds are non-ionic, cationic and/or anionic surfactants having good emulsifying, dispersing and wetting properties, depending on the nature of the active ingredients (A), (B1), (B2) and (B3) to be formulated. Surfactants will also be understood as meaning mixtures of surfactants.

The surfactants customarily employed in formulation technology are described, inter alia, in the following publications:

“McCutcheon's Detergents and Emulsifiers Annual”, MC Publishing Corp., Glen Rock, N.J., 1988.

M. and J. Ash, “Encyclopedia of Surfactants”, Vol. I-III, Chemical Publishing Co., New York, 1980–1981.

Among the suitable surfactants there may be mentioned, e.g., polyacrylic acid salts, lignosulphonic acid salts, phenolsulphonic or (mono- or di-alkyl)naphthalenesulphonic acid salts, laurylsulfate salts, polycondensates of ethylene oxide with lignosulphonic acid salts, polycondensates of ethylene oxide with fatty alcohols or with fatty acids or with fatty amines, substituted phenols (in particular alkylphenols or arylphenols such as mono- and di-(polyoxyalkylene alkylphenol) phosphates, polyoxyalkylene alkylphenol carboxylates or polyoxyalkylene alkylphenol sulfates), salts of sulphosuccinic acid esters, taurine derivatives (in particular alkyltaurides), polycondensates of ethylene oxide with phosphated tristyrylphenols and polycondensates of ethylene oxide with phosphoric esters of alcohols or phenols. The presence of at least one surfactant is often required because the active substance and/or the inert vehicle are not soluble in water and the carrier agent for the application is water.

Furthermore, particularly useful adjuvants which enhance application are natural or synthetic phospholipids from the series of the cephalins and lecithins, for example phosphatidylethanolamine, phosphatidylserine, phosphatidylglycerine or lysolecithin.

The agrochemical compositions generally contain: 0.1 to 99%, in particular 9 to 50%, more particularly 20 to 25% of the active substances (A), (B1), (B2) and (B3); the balance of the formulation comprising a solid and/or liquid carrier along with optional surfactant(s) and other optional inert ingredients known in the art such as, e.g., protective colloids, adhesives, thickeners, thixotropic agents, penetrating agents, preservatives, stabilizers, antifoaming agents, antifreeze agents, sequestering agents, dyes, pigments, colorings and polymers.

In one embodiment, commercial products will preferably be formulated as concentrates whereas the end user will normally use dilute formulations.

Formulation Examples (% = per cent by weight)

The examples which follow are intended to illustrate and not limit the invention, "active ingredient" being understood as meaning a mixture of the active substances (A), (B1), (B2) and (B3) in a particular mixing ratio of (A):(B1):(B2):(B3)=(160 to 120):(3 to 2):(1.2 to 1):(10 to 4).

Example F1: Emulsifiable concentrates	a)	b)	c)
active ingredients	25%	40%	50%
calcium dodecylbenzenesulfonate	5%	8%	6%
castor oil polyethylene glycol ether	5%	-	-
tributylphenol polyethylene glycol ether	-	12%	4%
cyclohexanone	-	15%	20%
xylene mixture	65%	25%	20%

Emulsions of any desired concentration can be prepared from this concentrate by dilution with water, and can be employed in crop protection and in seed treatment applications.

Example F2: Dusts	a)	b)
active ingredients	5%	8%
talc	95%	-
kaolin	-	92%

Ready-to-use dusts are obtained by mixing the active ingredients with the carrier and grinding the mixture in a suitable mill. Such powders can be used for dry-dressing seeds.

Example F3: Wettable powders	a)	b)	c)
active ingredients	25%	50%	75%
sodium lignosulfonate	5%	5%	-
sodium laurylsulfate	3%	-	5%
sodium diisobutylphenolnaphthalenesulfonate	-	6%	10%
octylphenol polyethylene glycol ether	-	2%	-
highly dispersed silicic acid	5%	10%	10%
kaolin	62%	27%	-

The active ingredient is mixed thoroughly with the additives and the mixture is ground thoroughly in a suitable mill affording wettable powders which can be diluted with water to give suspensions of any desired concentration. Such slurries can be used for carrying out furrow treatments on prior to planting crops of plants and also for wet- or moist-dressing material which can be propagated, for example oil seeds or tubers of plants.

Example F4: Suspoemulsions	a)
active ingredients	22.5%
sulfated nonylphenol (polyoxyethylene condensate)	0.1%
phosphated tristyrylphenol (polyoxyethylene condensate)	4%
sodium lignosulfonate (polyoxyethylene condensate)	2%
NaOH (50%)	0.1%
silicone defoaming agent	0.1%
pigment(s)	9.5%
glycerin	20%
xanthan gum	0.2%
water	41.5%

This formulation is suitable for mixtures of solid and liquid active ingredients. The solid active ingredient(s) are mixed thoroughly with a portion of the emulsifiers and water and the mixture is ground thoroughly in a suitable mill. Another portion of the emulsifiers and water are mixed with the liquid active ingredient(s). The two mixtures are combined along with any other inert ingredients (such as pigments, thickeners, etc.) that are to be used in the formulation. Such suspoemulsions can be used for carrying out in furrow treatments prior to planting crops of

plants and also for wet- or moist-dressing material which can be propagated, for example oil seeds or tubers of plants.

Biological Examples

Biological Examples (% = per cent by weight unless otherwise indicated)

The examples which follow are intended to illustrate and not limit the invention. The pesticidal composition of the invention used in the examples comprises the following active ingredient (a.i.) mixture used at the noted application rate:

Active Ingredient Mixture		Application Rate (grams a.i./ 100 kg seed)
(A)	Thiamethoxam	400
(B1)	Mefenoxam	7.5
(B2)	fludioxonil	2.5
(B3)	difenconazole	24

Example B1: Emergence

Canola seed is treated with the pesticidal composition of the invention the rates given above and is seeded following procedures which correspond to conditions found in practice. Untreated seeds from the same origin are used for comparison purposes. Emergence (plants per meter) is evaluated.

TABLE B1

Treated Seed	Untreated Seed
23 plants/m	18 plants/m

Example B2: Vigor

Canola seed is treated with the pesticidal composition of the invention at the rates given above and is seeded following procedures which correspond to conditions found in practice under high crucifer flea beetle pressure. Untreated seeds from the same origin are used for comparison purposes. Plant vigor (1-2 leaf stage) is evaluated.

TABLE B2

Treated Seed	Untreated Seed
94%	18%

Example B3: Yields

Canola seed is treated with the pesticidal composition of the invention at the rates given above and is seeded following procedures which correspond to conditions found in practice. The crop is harvested from the field at maturity. Untreated seeds from the same origin are used for comparison purposes. Crop yield (bushels per acre) is evaluated.

TABLE B3

Treated Seed	Untreated Seed
43 (bu/ac)	28 (bu/ac)

In summary, it is seen that this invention provides a new at least quaternary pesticidal composition for the protection of plant propagation materials. Variations may be made in proportions, procedures and materials without departing from the scope of the invention as defined by the following claims.

We claim:

1. An at least quaternary pesticide composition comprising as active ingredients:

(A) an insecticidally or acaricidally effective amount of a compound of the formulae (I) or (II)

wherein

A is 2-chloropyrid-5-yl, 2-methylpyrid-5-yl, 1-oxido-3-pyridinio, 2-chloro-1-oxido-5-pyridinio, 2,3-dichloro-1-oxido-5-pyridinio, tetrahydrofuran-3-yl, 5-methyl-tetrahydrofuran-3-yl or 2-chlorothiazol-5-yl group,

R is hydrogen, C₁-C₆alkyl, phenyl-C₁-C₄alkyl, C₃-C₆cycloalkyl, C₂-C₆alkenyl or C₂-C₆alkynyl;

R₁ and R₂ are independently of each other C₁-C₄-alkyl, C₁-C₄-alkenyl, C₁-C₄-alkynyl, -C(=O)-CH₃ or benzyl; or together form a group -CH₂-CH₂-, -CH₂-CH₂-CH₂-, -CH₂-O-CH₂-, -CH₂-S-CH₂-, -CH₂-NH-CH₂- or -CH₂-N(CH₃)-CH₂-; and

X is N-NO₂ or N-CN or CH-NO₂; , or, where appropriate, a tautomer thereof, in each case in free form or in salt form; or

at least one phenylpyrazole compound of formula (II)

wherein

R₁ and R₂ may represent a hydrogen or halogen atom (at least one of them is preferably other than hydrogen),

R₃ may represent a halogen atom or a haloalkyl or haloalkoxy or SF₅ group, in the 4 position on the phenyl ring,

R₄ may represent an alkyl or haloalkyl group,

R₅ may represent an amino group which may be mono- or di- substituted by an alkyl or haloalkyl radical, acyl, alkoxycarbonyl, and

n is 0, 1 or 2; in free form or in salt form; and

(B) a fungicidally effective amount of at least three fungicides selected from the group consisting of formulae (III), (IV) and (V):

wherein

R₁ is methyl; R₂ is in ortho position to the amino group and is methyl, ethyl or chlorine; R₇ and R₈ independently are hydrogen or methyl; R' is methyl; and Y is -OR₄ or -SR₄ in which R₄ is methyl, ethyl, propyl, isopropyl, butyl, sec. butyl or tert. butyl; and enantiomers thereof; in free form or in salt form;

wherein

X is hydrogen or CO—R₁, wherein R₁ is C₁–C₆alkyl which is unsubstituted or substituted by halogen or C₁–C₃alkoxy; or is C₃–C₆alkenyl, C₃–C₆alkynyl, or C₁–C₆alkoxy which is unsubstituted or substituted by halogen or C₁–C₃alkoxy; or is C₃–C₆alkenyloxy, or C₃–C₆cycloalkyl; in free form or in salt form; and

wherein

R₁₂, R₁₅ and R₁₈ are hydrogen, halogen, C₁–C₃alkyl, C₁–C₃alkoxy or nitro; in free form or in salt form; together with a suitable carrier therefor.

2. A composition according to claim 1 which contains (A) an insecticidally or acaricidally effective amount of a compound selected from the group consisting of: a compound of the

formula

(Ia), imidacloprid, (E)-1-(2-chlorothiazol-5-

ylmethyl)-3-methyl-nitroguanidine (TI-435), nitenpyram, thiacloprid, and acetamiprid.

3. A composition according to claim 2 which contains (A) an insecticidally or acaricidally

effective amount of a compound of the formula

(Ia).

4. A composition according to claim 1 which contains (A) an insecticidally or acaricidally effective amount of fipronil.

5. A composition according to claim 1 which contains (B1) a fungicidally effective amount of a compound selected from the group consisting of metalaxyl; metalaxyl consisting of more than 70% by weight of the R-enantiomer; metalaxyl consisting of more than 85% by weight of the R-enantiomer; metalaxyl consisting of more than 92% by weight of the R-enantiomer; metalaxyl consisting of more than 97% by weight of the R-enantiomer; and mefenoxam.

6. A composition according to claim 1 which contains (B2) a fungicidally effective amount of fludioxonil.

7. A composition according to claim 1 which contains (B3) a fungicidally effective amount of difenoconazole.

8. A composition according to claim 1 which contains:

(A) an insecticidally or acaricidally effective amount of a compound of the formula

(Ia); and

(B) a fungicidally effective amount of at least three fungicides selected from the group consisting of (B1) mefenoxam, (B2) fludioxonil and (B3) difenoconazole.

9. A composition according to claim 8 wherein the ratio of active ingredients (A):(B1):(B2):(B3) is (400g):(7.5g):(2.5g):(24g).

10. Pest-resistant plant propagation material comprising plant propagation material treated with a pesticidally effective amount of a pesticidal composition, wherein said pesticidal composition comprises as active ingredients:

(A) an insecticidally or acaricidally effective amount of a compound of the formulae (I) or (II)

(I),

wherein

A is 2-chloropyrid-5-yl, 2-methylpyrid-5-yl, 1-oxido-3-pyridinio, 2-chloro-1-oxido-5-pyridinio, 2,3-dichloro-1-oxido-5-pyridinio, tetrahydrofuran-3-yl, 5-methyl-tetrahydrofuran-3-yl or 2-chlorothiazol-5-yl group,

R is hydrogen, C₁-C₆alkyl, phenyl-C₁-C₄alkyl, C₃-C₆cycloalkyl, C₂-C₆alkenyl or C₂-C₆alkynyl;

R₁ and R₂ are independently of each other C₁-C₄-alkyl, C₁-C₄-alkenyl, C₁-C₄-alkinyl, -C(=O)-CH₃ or benzyl; or together form a group -CH₂-CH₂-, -CH₂-CH₂-CH₂-, -CH₂-O-CH₂-, -CH₂-S-CH₂-, -CH₂-NH-CH₂- or -CH₂-N(CH₃)-CH₂-; and

X is N-NO₂ or N-CN or CH-NO₂; , or, where appropriate, a tautomer thereof, in each case in free form or in salt form; or

at least one phenylpyrazole compound of formula (II)

wherein

R_1 and R_2 may represent a hydrogen or halogen atom (at least one of them is preferably other than hydrogen),

R_3 may represent a halogen atom or a haloalkyl or haloalkoxy or SF_5 group, in the 4 position on the phenyl ring,

R_4 may represent an alkyl or haloalkyl group,

R_5 may represent an amino group which may be mono- or di- substituted by an alkyl or haloalkyl radical, acyl, alkoxycarbonyl, and

n is 0, 1 or 2; in free form or in salt form; and

(B) a fungicidally effective amount of at least three fungicides selected from the group consisting of formulae (III), (IV) and (V):

wherein

R_1 is methyl; R_2 is in ortho position to the amino group and is methyl, ethyl or chlorine; R_7 and

R_8 independently are hydrogen or methyl; R' is methyl; and Y is $-OR_4$ or

$-SR_4$ in which R_4 is methyl, ethyl, propyl, isopropyl, butyl, sec. butyl or tert. butyl; and

enantiomers thereof; in free form or in salt form;

wherein

X is hydrogen or CO—R₁, wherein R₁ is C₁–C₆alkyl which is unsubstituted or substituted by halogen or C₁–C₃alkoxy; or is C₃–C₆alkenyl, C₃–C₆alkynyl, or C₁–C₆alkoxy which is unsubstituted or substituted by halogen or C₁–C₃alkoxy; or is C₃–C₆alkenyloxy, or C₃–C₆cycloalkyl; in free form or in salt form; and

wherein

R₁₂, R₁₅ and R₁₈ are hydrogen, halogen, C₁–C₃alkyl, C₁–C₃alkoxy or nitro; in free form or in salt form; together with a suitable carrier therefor.

11. A pest-resistant plant propagation material according to claim 10 wherein said pesticidal composition contains (A) an insecticidally or acaricidally effective amount of a compound selected from the group consisting of: a compound of the formula

(Ia), imidacloprid, (E)-1-(2-chlorothiazol-5-ylmethyl)-3-

methyl-nitroguanidine (TI-435), nitenpyram, thiacloprid, and acetamiprid.

12. A pest-resistant plant propagation material according to claim 11 wherein said pesticidal composition contains (A) an insecticidally or acaricidally effective amount of a compound of the

formula

(Ia).

13. A pest-resistant plant propagation material according to claim 10 wherein said pesticidal composition contains (A) an insecticidally or acaricidally effective amount of fipronil.

14. A pest-resistant plant propagation material according to claim 10 wherein said pesticidal composition contains (B1) a fungicidally effective amount of a compound selected from the group consisting of metalaxyl; metalaxyl consisting of more than 70% by weight of the R-enantiomer; metalaxyl consisting of more than 85% by weight of the R-enantiomer; metalaxyl consisting of more than 92% by weight of the R-enantiomer; metalaxyl consisting of more than 97% by weight of the R-enantiomer; and mfenoxam.

15. A pest-resistant plant propagation material according to claim 10 wherein said pesticidal composition contains (B2) a fungicidally effective amount of fludioxonil.

16. A pest-resistant plant propagation material according to claim 10 wherein said pesticidal composition contains (B3) a fungicidally effective amount of difenoconazole.

17. A pest-resistant plant propagation material according to claim 10 wherein said pesticidal composition contains:

(A) an insecticidally or acaricidally effective amount of a compound of the formula

(Ia); and

(B) a fungicidally effective amount of at least three fungicides selected from the group consisting of (B1) mefenoxam, (B2) fludioxonil and (B3) difenoconazole.

18. A pest-resistant plant propagation material according to claim 17 wherein the ratio of active ingredients (A):(B1):(B2):(B3) in said pesticidal composition is (400g):(7.5g):(2.5g):(24g).

19. A method of protecting plant propagation material against attack by insects or representatives of the order order Acarina and phytopathogenic fungi which comprises treating said plant propagation material with an insecticidally (or acaricidally) and fungicidally effective amount of a composition according to claim 1.

20. A method according to claim 19 wherein said plant propagation material is a plant seed selected from the group consisting of canola, rape, mustard seed, poppy, olives, sunflowers, coconut, castor oil plants, cocoa beans, groundnuts.
